Broadmead	For Willamina Branch
Dallas	For Falls City Branch

Ashland—Eastward freight trains will use No. 1 track and when necessary double over to No. 3 track. Westward freight trains will use No. 4 track and when necessary double to No. 2 track. During the hours no yard engine is on duty both freight and passenger trainmen will be required to head their trains in and out of Ashland yard, also set out or pick up any cars for their train and handle their engines to and from roundhouse.

Roseburg—Passenger trains taking siding to meet trains will use No. 5 track, entering switch for eastward trains just east of signal No. 5724, for westward trains just west of signal No. 5729. Eastward freight trains entering yard will use No. 1 track. Westward freight trains will use scale track. Trains holding main track must stop clear of switch used by train to be met in entering No. 5 track.

Eugene Siding extends from signals 6472-6473 to signals 6490-6491 and first class trains (except Marshfield Subdivision first class trains) will use siding between signals 6472-6473 and 6476-6477.

Eugene Yard Siding extends from signals 6490-6491 to signals 6504-6505.

Marshfield subdivision main track ends at Eugene at switch connecting with Eugene siding at signals 6482-6483. Marshfield Subdivision trains must use this siding to and from Eugene Passenger Station. Other trains must not use this siding when such use will interfere with the movement of Marshfield Subdivision first-class trains. Switch at junction Marshfield Subdivision main track and Eugene siding must be left set and locked for Marshfield Subdivision.

Page siding extends from signals 6896-6897 to signals 6902-6903.

Oregon Electric Ry. connection is located at M. P. 691.3, Albany yard.

Albany siding extends from signals 6902-6903 to signals 6910-6911.

When eastward first-class trains are to take siding at Albany to meet other trains they will take siding at connection switch just east of signals 6906-6907.

Tallman Branch main track ends at clearance point west of west switch Page. Tallman Branch trains must use Page siding and Albany siding between Page and Albany, other trains must not use Page siding and Albany siding when such use will interfere with the movement of Tallman Branch trains.

Yaquina Branch main track ends at switch at east end of curve connecting with track parallel with main track in east end of Albany yard which is track nearest the passenger station.

Geer Branch at Salem ends at signboard near passenger station and at Geer ends at first wye switch which must be left set and locked for west leg of wye.

When eastward trains are to take siding at Salem to meet other trains, they will take siding at connection switch just east of signals 7178-7179.

Canby siding extends from signals 7464-7465 to signals 7468-7469. Flander siding extends from signals 7468-7469 to signals 7478-7479. Molalla Branch ends at Flander at west wye switch connecting with the siding which extends to Canby.

West wye switch Geer will be left set and locked for movements between Salem and Lebanon and east wye switch for movements between Salem and Silverton.

West wye switch Shelburn will be left set and locked for movements between Mill City and Lebanon, and east wye switch for movements between Lebanon and Geer.

East wye switch at Tallman will be left set and locked for movements between Albany and Lebanon and west wye switch for movements between Albany and Brownsville.

Oregon Electric Ry. connection is located at M. P. 688-D east of Lebanon Station.

At Larson, junction switch for Hammond Lumber Company spur, leading off main track will be lined and locked for their spur, this acting as a derail. Main track between this junction switch and west yard limit sign will be used as an interchange track. Trains and engines using this track must move with caution expecting to find track occupied by cars.

Switches at Corvallis and Corvallis Jct. must be left set and locked for movement between Wellsdale and Philomath via Sixth Street line.

At Dallas west wye switch connecting with Monmouth Branch will be left set and locked for the wye, Monmouth Branch main track between this switch and junction switch at water tank 1000 ft. east will be used as a storage track. Trains to and from Monmouth Branch will move through west leg of wye connecting with Falls City Branch.

At Dallas, all Falls City Branch trains use Monmouth Branch main track between junction switch and passenger station.

DERAILERS IN MAIN TRACK

Clearance point main track Wendling Branch at Mohawk Jct.
241 ft. west of west siding switch main track at Detroit.
Clearance point main track Milwaukie Branch at Willsburg Jct.
Yaquina, 500 feet west of station.
Clearance point main track Falls City Branch at Lemrock.
Clearance point main track West Side Branch at Wilsonia.

RULE 509. When a block signal in advance of facing point oil buffer spring switch indicates "Stop," careful examination of switch must be made before passing over it.

RULE 516. Overlap posts affecting trains are located:

Eastward trains:	Latham, 1700 feet west of signal 6252.
	Swain, 1900 feet east of signal 6594 or opposite fouling point of storage track.
	East Milwaukie, 500 feet west of east switch.
Westward trains:	Reed, 1740 feet east of west switch.

RULE 827. Eastward freight trains will stop for inspection at Cruzatte, Wicopee, McCredie Springs and Timber, except that when stop is made at Fields of ten minutes or more inspection will be made there instead of Wicopee. Westward freight trains will stop at Hugo and Mayo. Between other points maximum distance any freight train may run without stopping for inspection will be between points where stops are made to take water, providing such stops are not greater than 50 miles apart. Freight trains not permitted to run more than 50 miles without stopping for inspection.

USE OF RETAINERS

Retainers will be used on descending grades as follows:

Cascade Summit-Oakridge Glendale-Grants Pass		1 valve for every 140 Ms in train.
Timber-Enright Black Rock-Falls City		1 valve for every 100 Ms in train.
Tunnel 25-Buxton Summit-Nashville		1 valve for every 120 Ms in train.
Divide-Comstock Rice Hill-M.P. 594 Rice Hill-M.P. 602	Freight trains only	1 valve for every 150 Ms in train.

Speed of freight trains must not exceed TWENTY-FIVE (25) MILES per hour. For the first FIVE (5) MILES the time consumed in traveling any one mile must not be less than THREE (3) MINUTES. This will not be authority to exceed specified speed restrictions.

Freight and work trains passing Cochran must be given a retainer test by car inspectors when on duty and by trainmen when car inspectors are not on duty. Trains must not leave Cochran with more than one retainer in ten inoperative.

Eastward passenger trains before passing Clay Street.

Marshfield Subdivision—One mile east and west of Siuslaw River Bridge Cushman, Umpqua River Bridge at Reedsport, Coos Bay Bridge between Coos and North Bend, Coalbank Slough at Marshfield.

Newberg Branch—East and west of Rex.

Tillamook Branch—Eastward trains before descending grade east of Tunnel 25.

Standing air brake tests must be made on eastward freight trains at Cascade Summit, and all trains at Cochran.

Between Cascade Summit and Oakridge an emergency hose must be applied on eastward freight trains at the most accessible place between the 8th and 15th cars from the head end.

Before descending grades, eastward trains Cascade Summit, eastward and westward trains Cochran, between November 1st and May 1st each year, with freight trains, the brake pipe must be blown out by uncoupling the hose between the first and second cars, then open angle cock on the head end of second car and the rear of the first.

When helper engine is in train, after rear end test has been made, the leading engine must not attempt to start until the helper engine has whistled off. The helper engine must not whistle off until receiving a signal from rear, which will not be given before the air pressure on caboose gauge indicates 70 pounds.

When air hose has been separated and pressure in rear of train has leaked below 70 pounds, as indicated on caboose gauge, before starting train, signal must be given from rear end. In order to carry out these instructions, a trainman must be stationed so as to observe caboose gauge.

Air brakes on two adjoining cars must not be cut out leaving any station where cars can be separated.

Standing air brake test will be made one minute before passenger trains leave Union Station, Portland, as follows: Air inspector will attach gauge to rear end of train and give four blasts of air signal from rear car. Enginemen will make full service application. Inspector will note fall of pipe pressure and then signal engineman to release by four blasts of air signal. If pressure comes up on brake pipe on rear end to the standard carried, conductor will be advised that train is ready to proceed. Passenger trains leaving Portland will not make running test until after crossing Willamette River Bridge. Rear brakeman of westward passenger trains making running test after crossing Willamette River Bridge, Portland, per Rule 16, Rules and Regulations Governing Care and Operation of Air Brake and Air Signal Apparatus, must signal enginemen by use of signal whistle.

When passing over Willamette River Bridge, Portland, a trainman will remain at rear of train in position to apply emergency brake if necessary.

AUTOMATIC BLOCK SYSTEM

Between signal bridge west of train order office, Brooklyn, and Clay St., trains stopped by signals 7666, 7672, 7678, 7686, 7691, 7693, 7687, 7679 or 7673 may then proceed with caution not exceeding 12 miles per hour, to next clear distant or home signal. Flagman need not precede train.

Movement over S. P. & S. crossings against the current of traffic on double track East Portland between Main and Madison Streets will be governed by signals governing traffic on the opposite track.

If the view of signals is obstructed, flag over this crossing.

First-class trains run with caution between signal bridge west of train order office Brooklyn and Union Station Portland, also within yard limits Cascade Summit.

Salem—Signal 7182 governs movements out of siding to main track when both switches are lined for that purpose. Signals 7184 and 7185 are for main line movements only. Switch for T. Kay Woolen Mill will be normally lined for spur.

Lemrock—Dwarf signal 7191 on Falls City Branch governs movements of trains from Falls City Branch.

Normal indication of home signal at Willsburg Junction on Milwaukie Branch is stop. If signal does not clear after switch is lined for diverging route be governed by Rule 509.

When a Milwaukie Branch train is stopped by signal 7657 and opposing train is standing on main track clear of junction switch at Willsburg Junction, it may proceed immediately with caution, not exceeding 12 miles per hour to junction switch, providing track is seen to be clear to that switch.

Eastward main line trains holding meet or waiting for opposing trains to enter Milwaukie Branch at Willsburg Junction will stop West of signal 7646 west of Willsburg Junction.

Eastward trains occupying main track at East Milwaukie to be met will stop west of sign reading "Overlap," located left side of track 500 feet west of east switch.

Eugene Yard—Signal 6487 governs movement of westward trains from yard tracks to main track. Signal indicates proceed only when both switches are lined for movement from yard to main track and block is unoccupied.

Springfield—Dwarf signal 6196 on Woodburn-Springfield Branch governs movements of trains from Woodburn-Springfield Branch.

Mohawk Jct.—Dwarf signal 6180 on Wendling Branch governs movements of trains from Wendling Branch.

Albany—Oregon Electric trains using Southern Pacific track between Albany and Lebanon will cross Southern Pacific main track just west of signal 6912-6913 and use Albany and Page sidings between Tallman Branch track and junction switch at Lafayette Street and in addition to complying with Rules 83, 83-C and 93, must obtain permission from operator at Albany before crossing Southern Pacific main track.

Lebanon—Oregon Electric junction switch is located at M. P. 688.9. Normal position of switch is for Southern Pacific main track. Normal indication of block signal on Oregon Electric track is "stop" and will change to "proceed" when switch is opened providing Southern Pacific main track is clear between block signals on Southern Pacific main track located on both sides of junction switch. Oregon Electric trains must obtain permission from operator when on duty before entering Southern Pacific main track.

Oregon Electric Junction Lebanon is protected by automatic signals 6888 and 6891. Signal 6889 on Oregon Electric is normal at stop and will clear only after derail and main line switch is lined for O. E. If signal does not clear, Rule 509 governs. Derail and switch should not be operated unless indicators show clear.

Approaches to tunnels Nos. 13, 15, 16 and 19, Marshfield subdivision are protected by block signals.

At Ashland, trains or engines stopped by signals 4293 or 4297 may proceed with caution not exceeding 12 miles per hour.

Eastward trains holding main track at Coos to meet a westward train, will stop west of block signal located between switches of siding, unless train to be met is on the siding.

INTERLOCKING

SPRINGFIELD JCT.—Interlocking limits extend from Signal 6447, east of junction switch, and Signals 6208 on Cascade Line and 6446 on Siskiyou Line. Top arm of Signal 6447 will govern route to Cascade Line, lower arm to Siskiyou Line.

SPOKANE, PORTLAND & SEATTLE RY. CROSSING between Main and Madison Sts., Portland.

at which trains will stop before crossing and be governed by Rule 14 (B). When trains stop on crossings not protected by interlocking signals the other line must be protected per Rule 99.

At W. V. R. crossing just east of Oregon City the normal position of the signals and derailers governing the Interlocking Plant are proceed and derailers closed for Southern Pacific trains. When these signals are at "Stop," the Conductor or person in charge of the train must send two flagmen ahead in order to pass signals, and after careful inspection, when it is known there is no one in the Interlocking station to operate the plant, and that the signals are at stop and derailers governing the movement of W. V. R. trains are set to derail, and that derailers on either side of the crossing governing Southern Pacific trains are closed and route known to be clear for Southern Pacific trains, flagman will give "proceed" signal.

At railroad crossing with the Willamette Valley Railway east of Liberal, between sunset and sunrise, and during the day when the view is obscure due to fog or any other condition, flagmen must be sent in each direction a sufficient distance on the Willamette Valley Railway to insure full protection of the movement over the crossing.

Crossing with Oregon Electric at Tigard is controlled by automatic signals, normal position stop. A train approaching on either line will cause signals to change to proceed position provided no train is occupying the circuit on opposite line. If signal does not give proceed indication to train approaching crossing, train must be preceded by flagman and train must not move beyond signal in stop position until it receives proceed signal from flagman at railroad crossing, and flagman must not give proceed signal until satisfied that any approaching train on opposite line has stopped.

At Hawthorne Ave., Portland, hand signals permitted by Rule 628 may be given by signal operator in tower to move through interlocking plant.

Interlocking plant Willamette River Bridge between East Portland and Portland is governed by O. W. R. R. & N. rules, which Rules are identical with Southern Pacific Rules. United Railway tracks cross both main tracks at the center of Front Street between Willamette River Bridge and Union Station, Portland. Movements over United Railway tracks are protected by connection with interlocking signals governing movement over O.-W. R. R. & N. main tracks.

The following whistle signals will be used for movements through interlocking plant:

To Portland, one long.
To Albina, one long, one short.
To S. P. Main Line, one short, one long.
To Transfer Track, one long, one short, one long.
To Graham (Sulivan Gulch Line), two long.
To East Second St., two short, one long.
To S. P. Yard, one short, one long, one short

MISCELLANEOUS

Portland Union Station.—Trainmen and Enginemen are subject to the rules and regulations of the Northern Pacific Terminal Co.

Engineers of westward through passenger trains in making steam pipe tests of trains before leaving Union Station Portland, will use pressure of 130 pounds; other passenger trains 100 pounds.

Pulp siding is private track and must not be used for meeting trains between 8 a. m. and 5 p. m. on week days.

At Salem, Falls City Branch trains use main track between Lemrock and Salem. Such trains must call operator Salem on telephone from Lemrock and obtain permission to proceed to Salem. Operator Salem when permitting this move must hold all opposing trains until the train arrives.

In making up trains main line movement, consisting of loads and empties, a sufficient number of empties must be placed on head end of train when construction of cars will permit in order to equalize braking power. Wood frame cars must in all cases be placed behind loads in rear of train. This will not apply to branch line freight trains, to locals of less than forty cars or to trains picking up and setting out at stations between Brooklyn and Eugene.

Markers must be kept burning on trains between Lawler and Cascade Summit.

Trains switching at Oakridge must have engine on East end of cars being switched, except when switching on siding where moves are protected by derail.

SPECIAL INSTRUCTIONS—Continued

Helper engines should be cut in at Oakridge behind forty-eight cars, but in all cases ahead of all wooden underframe cars. In the event train consists of only forty-eight cars or less, helper engines should be cut in ahead of six cars, including caboose, and ahead of all wooden frame cars. This does not modify Rule 834.

Helper engines take full tank of water before leaving Cascade Summit returning light to Oakridge.

Short movements with heavy freight trains to spot for oil and water are prohibited. In all cases where it is necessary to make a short move to reach oil or water column, including that required to spot second engine of double-header, locomotive must be cut off before spotting at column, except, westward freight trains taking water at McCredie Springs, Wicopee and Cruzatte, will spot road engine without detaching from train. When this has been accomplished, engineer on road engine will make a 15-pound brake pipe reduction. When such reduction is noted by engineers of helper engines in rear of train, both helper engines will cut off and back up to water spout. Engineer of lead helper engine will indicate to brakeman when to cut off. After cutting helper engines off, brakeman must secure rear portion of train ahead of helpers with sufficient hand brakes to hold train. Helper engines after taking water must return to train and couple up immediately. If any work found necessary on engines or train, it must be done after helpers are recoupled to train. Engineer on road engine, when helpers are detached, must note carefully brake pipe pressure. When pressure leaks below 55 pounds, he must immediately recharge brake pipe.

Between Eugene and Ashland, all helpers of freight trains will be put in train behind 75 per cent of tonnage of train.

When necessary to leave cars on siding at Cochran they must be placed 200 feet west of west crossover switch.

Use caution from end of long trestle to new sawmill on down-town track at Tillamook. Engines must not run on high-line trestle spur.

At Wilkesboro, S. P. & S. log trains operate on overhead crossing of Southern Pacific tracks. Southern Pacific trains will stop before passing under the S. P. & S. track while log trains are passing on overhead crossing in either direction.

Car limit on descending grades between Westimber and Belding fifty cars with one Consolidation on head end, thirty-five cars with one small 2900 Class Engine on head end. Sixty cars Westimber to Buxton with Consolidation or large 2900 Class Engine on head end.

Trains should have sufficient water leaving Wheeler and Tillamook making it unnecessary to take water between these points.

Two or more engines coupled must not operate over truss bridges between Geer and Coburg.

Pacific Spruce Company have permission to move their engine between their sawmill and their logging road within yard limits at Toledo. Keep a sharp lookout for this engine.

At Newberg, Spaulding Lumber Co. have permission to move their engine on main track in yard limits, trains will keep sharp lookout for this engine.

At Dundee, use four cars ahead of engine in addition to cars being spotted at Cannery on high line track.

Single wire line between Marshfield and Myrtle Point is telegraphone line and all concerned are cautioned not to use the high voltage line on opposite side of track.

When cars are left on grades not protected with derailers they must be chained to rail.

Dead engines in trains will be handled on head end not more than eight or ten cars from road engine, except on Tillamook Branch dead logging engines will be handled at least five cars ahead of caboose.

It is not permissible to handle K. & J. cars in mixed trains.

MAXIMUM SPEED

F-4-5 and Consolidation Engines 45 miles per hour.

Mallet Engines class AC-1-2-3-4-5-6 40 miles per hour.

Engines with tenders of less than 9000 gallons capacity 50 miles per hour.

Speed limit for light engines, or engines running with caboose only:

	Miles Per Hour
Yard and other engines with pilots removed or not equipped with engine or pony trucks	20
Engines with drivers 50 inches diameter or less	30
F-4-5, Consolidations and Mallet AC-1-2-3-4-5-6	35
Other engines	40

Light engines must not exceed 25 miles per hour between Corvallis and Transfer.

Engines operated coupled tender to tender must not exceed speed permitted engines running backwards.

Disabled engines will be governed by following restrictions:

When main rod only is removed..............................30 miles per hour
When side rods only are removed..............................30 miles per hour
When both main and side rods are removed...............20 miles per hour

F-4-5 type engines must not exceed 6 miles per hour backing through switches.

On curves of 7 to 10 degrees, trains must not exceed 28 miles per hour; 10 to 12 degrees, 20 miles per hour; over 12 degrees, 15 miles per hour, except that where F-3600 or 3700 class engines are operated, trains must not exceed 25 miles per hour on 10 degree curves; 20 miles per hour on curves 10° 30′ to and including 12° 30′; 15 miles per hour on curves 12° 30′ to and including 15 degrees, and 12 miles per hour on curves 15 to 17 degrees.

Trains handling steam relief outfit must not exceed 25 miles per hour on main line between Ashland and Portland, Crescent Lake and Eugene, and 18 miles per hour on other lines.

Maximum speed allowed trains handling logs loaded on flat or logging cars is twenty (20) miles per hour unless otherwise restricted, and must not exceed fifteen (15) miles per hour over truss bridges, around curves of over six degrees, and passing through stations and tunnels.

Trains must not exceed 15 miles per hour passing through sidings on Main line and 12 miles per hour through sidings on other lines.

Wooden passenger cars, when used in main line service, must be equipped with steel center sills and steel platforms, except

Total Portland Division					1199.15

When employes, passengers or others are injured, call the nearest Company Surgeon, preferably District Surgeon. Emergency Surgeons are called only when patients cannot be sent to or await the arrival of District Surgeons.

When necessary to call Surgeons other than those regularly employed by the Company, it should be with the distinct understanding that their services will not be required after the arrival of Company Surgeon. Any officer of the Company is authorized to call Company Surgeons to attend the injured.

When tramps or other trespassers are injured on the Company's Lines, they should be turned over to friends, or to city, county or other local relief authorities, after immediate necessary attention has been rendered by Company Surgeon.
